A scatter plot on a white background with a light gray grid. The grid consists of 10 major vertical divisions and 10 major horizontal divisions. There are two data series: red points and blue points. The red points are primarily located in the lower half of the plot, forming a horizontal band across the bottom. There are also some red points scattered in the upper half. The blue points are primarily located in the upper half of the plot, forming a vertical band on the left side. There are also some blue points scattered in the lower half. The overall distribution suggests a separation between the two classes based on their spatial coordinates.
