A scatter plot on a white background with a light gray grid. The plot contains two sets of data points: red dots and blue dots. The points are distributed in a complex, non-linear pattern across the 2D space. The red points are generally located in the upper-left, upper-middle, and lower-right regions, while the blue points are generally located in the lower-left, middle, and upper-right regions. There is a significant overlap between the two classes, particularly in the central and lower-middle areas. The overall shape of the distribution is somewhat elongated from top-left to bottom-right. The grid lines are spaced at regular intervals, providing a reference for the positions of the points.
